

SODIUM SULPHATE (Na_2SO_4)

Basic Detail :

Sodium sulphate anhydrous (Na_2SO_4) called Glauber Salt or sulphate of soda. It is chemically very stable and has an appearance of white crystalline solid. It has unsteady reaction towards most reducing or oxidizing agents at normal temperatures. In addition to this, it can be turned to sodium sulphide at high temperature by carbo-thermal reduction process. The dry salt form of sulphuric acid is derived from Sodium sulphate anhydrous. All the forms of sodium sulphate have good solubility in water and white appearance.
